Country house jug in concrete look

Instructions No. 1395

Difficulty: Beginner

Working time: 30 Minutes

The **Landhaus Kanne** is a great eye-catcher in house and garden. Furthermore, you will learn in this manual that **concrete effect** can **also** be applied very well to metal objects.

This creates the concrete effect:

Apply the Concrete Effect Paste to the jug with a spatula. After drying, the paste is lightly sanded. Then wipe dark concrete glaze, then light glaze paint onto the jug with a painting sponge. This creates the typical concrete look.

Print out the design template and transfer the lettering to the jug. Paint it with the VBS Pearl-Pen after.

As a special something, pull a white Organza ribbon through the slits of the metal jug, tie a bow and - if desired - pierce a Pin with a bead head through the middle of the bow.

The jug is ideal for presenting fresh peonies. Alternatively, artificial flowers can be used for decoration. The fake hydrangeas, ranunculus or roses remain permanently decorative.
