Self-cast Easter eggs

Instructions No. 1550

Difficulty: Beginner

Working time: 40 Minutes

This idea shows you how versatile the new creative casting compounds can be used for the ceramic look!

For this idea **Acrylic eggs with bore** are used. The casting compound is poured through the drilled hole into the closed Acrylic forms .

To ensure that this is as easy as possible, you should prepare your workstation before filling it so that the Acrylic forms is hung over a protective film.

For 3 small Acrylic-eggs of 8 cm each you need approx. 1 kg of the casting compound. This is mixed a little more liquid than indicated on the product package, so that it can be filled more easily into the closed moulds.

After approx. 30 minutes the **casting compound** has hardened to such an extent that it can be released from the

Acrylic-eggs.

Let the white Easter eggs dry out a little longer. After about 2 hours the cast objects further can be designed.

Decoration with Napkin technique

Carefully cut or tear out the feather motifs and fonts from the Napkin . Spread the cast eggs with Napkin varnish and stick the Feathers on the white surfaces with a brush. If the motifs are torn, the areas that are not glued are then coloured, so that the Napkins-edges are unobtrusive.

Decorate

With a little Jute ribbon, Feathers, lace and small labels the egg objects become special Easter highlights. They are placed only still in a suitable Easter nest - ready!

Protect

You want to use the white eggs as an exterior decoration? Then you should definitely cover the objects with a Protective varnish !

Extra tip: Colouring

White casting compounds for the ceramic look can be coloured without any problems. Simply add a few drops of Colour Concentrate to the casting compound and stir well. Our **basic casting design guide** explains exactly how to do it.

Must Have

Keraflott Relief Casting Powder, White, 1 kg

Weight: 1 kg

40,99 zł (1 kg = 40,99 zł)
