Stamped Christmas Cards

Instructions No. 2425

Difficulty: Beginner

Working time: 30 Minutes

How nice it is to find a **personalised card** in the post or to have a beautifully designed card enclosed with a gift. In our instructions, we describe how you can easily create beautiful cards with the help of **silicone stamps**.

This is how you design the cards:

First, choose a **card** and decide whether you want to make it portrait or landscape.

You can choose whether you want to stamp the **stamps** directly onto the card or whether you stamp them onto a contrasting coloured paper, then cut out the motif and stick it onto the card. Both look beautiful and always create new creative possibilities.

To stamp, simply place the desired **silicone stamp** on an acrylic block of a suitable size and press it into an ink pad until the motif is evenly wetted with ink. Now you can transfer the stamp motif to the desired place by pressing it.

After stamping, you should rinse the silicone stamps and, if necessary, the **acrylic blocks** with clear water so that you can continue to enjoy your stamping materials for a long time.

In addition, the cards can now be embellished with **decorative accessories, ribbons and hand lettering**.

Finally, the self-designed cards can be filled with personal words.
